Boost performance, tighten security, and extend the life of your IT assets

Your network or application is down – you need it corrected quickly or your business suffers through loss of productivity, revenue, or image.

With managed services from **WAN Strategies**, corrective action is already underway to get you up and running again.

Today's Business Environment

Your business is more dependent than ever on your network's availability, performance, and security – your software applications are business-critical.

Every moment that your employees can't send or receive e-mail, or access a database, your company is losing money and alienating customers.

- If your online catalog is not available, you are losing orders
- If your network is slowed by interactive games or is simply too small for your requirements, your productivity is suffering
- If someone is gaining unauthorized access to your network, your security is compromised

What "Managed Services" Means to You

Managed services means that **WAN Strategies** is continuously monitoring the health of your infrastructure. It isn't only for crisis management – it also provides:

- ✓ detailed reports, where you can view your IT information structure in a format that is easy to understand and always up to date
- ✓ web-based performance reporting – IT information in a format that allows you to understand the real performance of your IT infrastructure
- ✓ real-time hardware and software inventory – you will know exactly what equipment and software has been installed, and where the system resources are being used

Key Benefits

- Decrease in costly downtime
- Improved network performance
- More consistent IT management
- More productive visits from **WAN Strategies**
- Proactive approach to network stability
- Increased confidence in your network infrastructure
- Automated routine administrative functions
- Real-time expert system problem detection and correction
- Secure communication to **WAN Strategies**
- Reliable problem monitoring, reporting, and correction across your network
- Protection against security breaches

With managed services, you can:

Make sure you're getting full usage of your system before upgrading or expanding.

Make sure you know exactly what software has been installed on your network.

Be aware of upcoming problems, so you can consider proactive contingency plans and minimize downtime

System Requirements:

Windows XP Pro, Windows 2000 Pro/Server, or Windows 2003
